

Setting Mail server in Ubuntu 22

Initial server setup

Set server domain name

```
sudo apt -y update; sudo apt -y upgrade
sudo echo 'dev.dsinnovators.com' > /etc/hostname
sudo sed -i 's/\\(127.0.0.1\\).*\\/\\1 dev.dsinnovators.com/' /etc/hosts
sudo reboot now
```

Setup Mail Transfer Agent

Install required packages

```
sudo apt install -y mailutils
sudo apt install -y postfix
```

Update Postfix configuration

```
sudo dpkg-reconfigure postfix
> Internet Site
> System mail name: dev.dsinnovators.com
> Recipient for root: <enter>
> Other destinations to accept mail: dev.dsinnovators.com, localhost.dsinnovators.com, dsinnovators.com
> Force synchronous updates: <No>
> Local networks: 127.0.0.0/8 [::ffff:127.0.0.0]/104 [::1]/128
> Mailbox size limit: 0
> Local address extension character: +
> Internet protocols to use: all
```

Custom configuration

```
sudo vi /etc/postfix/main.cf

# Update
home_mailbox = Maildir/
inet_interfaces = loopback-only
masquerade_domains = dev.dsinnovators.com
```

Reload Postfix

```
sudo systemctl reload postfix
postconf -n
```

Verify server connection

```
telnet smtp.google.com 25
> ehlo smtp.google.com
```

Send Email

```
echo "Hello, from Rony" | mail -s "This is a test mail" <user>@yahoo.com
```

Thank you.
