

Mantis BT setup in Ubuntu 22 server with Nginx + MySQL

Official Guide: https://www.mantisbt.org/docs/master/en-US/Admin_Guide/html-desktop/#admin.install

Create Ubuntu 22 server in Cloud or VM

```
#!/bin/bash
echo 'mantis-server' > /etc/hostname
sudo apt -y update
sudo apt -y upgrade
reboot now
```

Setup Nginx server

Install base packages

```
sudo apt install -y wget vim unzip software-properties-common ca-certificates \
lsb-release apt-transport-https
sudo apt install -y nginx
```

Start Nginx server

```
sudo systemctl start nginx
sudo systemctl enable nginx
sudo systemctl status nginx
```

Setup MySQL server

Install database packages

```
sudo apt install -y mysql-server
```

Setup MySQL service

```
sudo systemctl start mysql
sudo systemctl enable mysql
sudo systemctl status mysql
```

Initial MySQL setup

```
sudo mysql
> UPDATE mysql.user SET plugin = 'mysql_native_password' WHERE User = 'root';
> SELECT user,authentication_string,plugin,host FROM mysql.user;
> FLUSH PRIVILEGES;
> exit
```

```
sudo mysql_secure_installation
```

```
> VALIDATE PASSWORD component? y
> Password strength: 0
> Remove anonymous users? y
> Disallow root login remotely? y
> Remove test database and access to it? y
> Reload privilege tables now? y
```

Setup database access

```
sudo mysql
> ALTER USER 'root'@'localhost' IDENTIFIED BY '12345678';
> CREATE USER 'mantis'@'localhost' IDENTIFIED BY '12345678';
> GRANT ALL PRIVILEGES ON mantisdb.* TO 'mantis'@'localhost' WITH GRANT OPTION;
> FLUSH PRIVILEGES;
> exit;
```

Create Mantis database

```
sudo mysql -u root -p
> CREATE DATABASE mantisdb;
> exit;
```

Install PHP-8

Add Ondrej PPA repository

```
LC_ALL=C.UTF-8
sudo add-apt-repository ppa:ondrej/php
sudo apt -y update
```

Install PHP

```
sudo apt install -y php
sudo apt install -y php-fpm php-ldap php-soap php-gd php-curl php-mysqli \
php-mbstring
```

Check PHP installed modules

```
php -m
```

Setup MantisBT server

Download MantisBT application

```
mantis_version=2.25.7
wget "https://downloads.sourceforge.net/project/mantisbt/mantis-stable/"
```

```
${mantis_version}/mantisbt-${mantis_version}.zip"
unzip mantisbt-${mantis_version}.zip
```

Host MantisBT app to Apache

```
mv -v mantisbt-${mantis_version} /var/www/mantis
sudo chown -R www-data:www-data /var/www/mantis/
sudo chmod -R 755 /var/www/mantis
```

Update default Nginx page config

Change server port from 80 to any other port in /etc/nginx/sites-enabled/default file.

```
sudo sed -i "s/\(.*\)80 \(.*\)\/181 \2/" /etc/nginx/sites-enabled/default
```

Update Nginx configuration

```
sudo su
cd /etc/nginx/sites-available/
cat > mantis << EOF
server {
    listen 80;
    listen [::]:80;
    root    /var/www/mantis;
    index  index.php index.html index.htm;
    server_name  mantis.example.com;

    access_log /var/log/nginx/mantis.com.access.log;
    error_log /var/log/nginx/mantis.com.error.log;

    client_max_body_size 100M;

    location / {
        index index.php index.html;
        try_files $uri /index.php$is_args$args;
    }

    location ~ \.php$ {
        include snippets/fastcgi-php.conf;
        fastcgi_pass unix:/var/run/php/php8.1-fpm.sock;
        include fastcgi_params;
        fastcgi_intercept_errors on;
    }
}
EOF
```

```
sudo ln -s /etc/nginx/sites-available/mantis /etc/nginx/sites-enabled/mantis
sudo systemctl restart nginx
```

Final MantisBT setup

Visit: <http://mantis-host/admin/install.php> for initial setup of the application.

Update database information to web server

- Browse the application from a browser.
- Update database username **mantis**
- Update database password **12345678**
- Update database name **mantisdb**
- Update admin username **root**
- Update admin password **12345678**
- Update default time zone **Dhaka**
- Install/Upgrade Database

Login to dashboard as administrator

Continue to Login page > Use 'administrator' username > 'root' password > Login.

Thank you.
